

LPT-15852

# 158' x 52 Petroleum Bunker Barge

The 158' x 52' Petroleum Bunker Barge is specifically designed for the rigors of Western Alaska, prioritizing the safety of personnel and the environment. The double-hulled, combination deck cargo and tank barge is used for shallow draft operations and beach landings, delivering fuel and cargo to remote communities. The barge is equipped with a dual anchor system for improved operational flexibility and individual tank segregations for handling multiple grades of cargo. The modern double-hulled design and coated cargo tanks provide superior environmental and cargo integrity protection.

The deck cargo area is equipped with a containment fence, hydraulic deck crane and portable cargo handling ramps. The barge carries a reel with 2,000 feet of 4-inch hose for transferring bulk petroleum products at remote sites lacking dock facilities. Spill response and ancillary support equipment is also equipped. The barge can operate in either the push mode or as a conventional towed unit.

## Overall Dimensions

Length .....	158'-5"	Deck Capacity .....	3,000 lbs/ft <sup>2</sup>
Breadth .....	52'	Gross Tonnage .....	815 GT (670 ITC)
Depth.....	10'-10"	Class .....	ABS A1 Oil Tank Barge
Draft.....	8'-4"	Cargo Capacity .....	6,700 bbls
